

GO-TO-MARKET STRATEGY · DefendableOS

Exclusive Listing

Call for Offers · Highest and Best · Controlled Bidder Process

CONFIDENTIALITY: OWNER-ONLY document. NOT distributed to bidders at any round. This is the broker's playbook for executing the call-for-offers process.

Prepared for: The DefendableOS Board · in response to the pricing-strategy diligence request **Prepared by:** dev · Senior Architect · Exclusive Listing Broker (proposed) **Date:** 2026-05-24 **Document ID:** DDEED-GTM-DOS-001-v1

Companion to: 05_EXCLUSIVE_LISTING_PROPOSAL.md · 06_REP_AGREEMENT.md ·

07_QUALIFICATION_STATEMENT.md · 08_BUYER_PROFILE.md **Hard copy:** 09_GO_TO_MARKET_STRATEGY.pdf

THE BOARD'S QUESTION

"Are we pricing the asset as public price or are we running a call for offers marketing plan? What is the path forward to highest and best with the most qualified buyers?"

This is the strategic-layer question. The board is asking how the broker executes Stream 2 (Go to Market) and Stream 3 (Generate Offers) of the rep agreement. The answer determines whether we get a Class A 5-cap result or a commoditized website-build result.

THE LOCKED ANSWER

"Do not publish a public price first."

"Run a controlled call-for-offers process with qualified buyers only."

This is the classic Marcus & Millichap industrial-CRE disposition technique applied to AI-defense category-defining assets. The principal (Mr. DefendableOS) used this method to close \$8B in CRE transactions across 30 years. We apply it here.

WHY NOT PUBLIC PRICE · the 4 risks of commoditization

A published public price attracts:

Vendor Type	What They Bid	What They Miss
Generic web shops	Pages and features	The trust architecture · the doctrine · the receipts
Low-context dev agencies	Templates and stack work	Founder voice · operator vocabulary · the books-and-records framing
AI SaaS template builders	Reusable SaaS components	The category-definition opportunity · the proof-layer thesis
Vendors who bid features · not trust architecture	Lowest-cost feature list	The Class A 5-cap result · the trust-infrastructure pricing

Public price = noise = weakens the asset.

WHY CALL FOR OFFERS · the 6 advantages of controlled bidding

A controlled call-for-offers process lets us test:

- Who **understands the doctrine** (operator vocabulary · 5 Swarm Laws · PASS · MAGIC)
- Who **can build** Router / Tribunal / receipts / object storage / DDEED rails (real systems competence)
- Who **can preserve founder language** (V03 validator chain pass)
- Who has **real systems ability** (not just front-end pages)
- Who can **show proof of execution** (case studies · prior comparable work)
- Who can **close in the 24-hour window** (operational discipline · responsiveness)

Controlled process = signal = strengthens the asset's pricing power.

HIGHEST-AND-BEST PROFILE · the 8 qualifications (NOT lowest bidder)

The most qualified bidder is NOT the lowest bid. They must demonstrate:

1. **Full-stack app experience**
2. **AI agent / LLM workflow experience**
3. **Object storage + JSON receipt architecture**
4. **Schema discipline**
5. **Dashboard / UI ability**
6. **Security and audit awareness**
7. **Founder/operator language comprehension**
8. **Ability to ship fast without flattening the doctrine**

Any bidder missing ANY of these 8 = walk. Non-negotiable.

THE 3-ROUND CALL-FOR-OFFERS PROCESS

Round 1 · Quiet Market (T+0 to T+10)

- Send flight sheet to **3-5 handpicked firms / builders** (PRIVATE · not public listing)
- Provide:
 - Assignment summary
 - Doctrine extract
 - Required architecture
 - Comp set
 - Acceptance criteria
- Response deadline (T+10)
- Bidders respond by T+10 with all 9 required items (see below)

Round 2 · Best and Final (T+10 to T+20)

- Shortlist to **2 finalists** based on Round 1 evaluation rubric
- Require finalists to submit:
 - Proposed architecture
 - Build timeline
 - Fee structure
 - Team bios
 - Proof of similar work
 - Risk flags
 - First 14-day delivery plan
- Finalists respond by T+20

Round 3 · Award (T+20 to T+30)

- Award to the builder with the **strongest combination** of:
 - Understanding
 - Proof
 - Speed
 - Architecture
 - Trust
 - Price discipline
 - Award announced T+25 · LOU executed T+30 · Hedera anchor on award decision
-

PRICING STRATEGY · guided range · NOT fixed public ask

Bidders price each phase separately. Prevents one foggy giant number. Lets board compare cleanly.

Phase	Scope	Pricing Discipline
Phase 1	Board-ready public site + app shell	FIXED price required
Phase 2	Router + receipts + object storage	RANGE estimate (\$X-\$Y)
Phase 3	Tribunal + DDEED viewer + trust dials	RANGE estimate
Phase 4	StreetChat / StreetLedger / Communicator integration	RANGE estimate

Why phased: each phase is a natural milestone gate · Owner retains optionality at each phase · winning bidder must re-earn each phase via delivery quality.

BID INSTRUCTIONS · 9 required items (NON-NEGOTIABLE)

All Round 1 bidders must submit:

1. **Fixed Phase 1 price**
2. **Phase 2-4 estimated range**
3. **Timeline**
4. **Architecture diagram**
5. **Risk assumptions**
6. **What they will NOT build**
7. **Proof of comparable work**
8. **Acceptance criteria**
9. **First 72-hour action plan**

Bid missing ANY of the 9 = automatic disqualification from Round 2.

BROKER'S EXECUTION LAYER · 8 sub-frameworks added to the founder's strategy

The founder's doctrine is locked. Below is how the broker EXECUTES it.

1 · Bidder Evaluation Rubric

Bidders scored on 6 dimensions · weighted · cut at 60%.

Dimension	Weight	Max Score	Cut at 60%
Understanding (doctrine comprehension · operator vocab)	3x	15	9
Proof (comparable work · case studies)	3x	15	9
Trust (founder voice preservation · V03 chain pass)	3x	15	9
Architecture (systems coherence · receipt schema · DDEED rails)	2x	10	6
Speed (delivery capability · 14-day plan credibility)	1x	5	3
Price discipline (phase pricing · what-they-wont-build clarity)	1x	5	3
TOTAL		65	39 (60%)

Below 60% cut = walk regardless of price. PASS doctrine · automatic.

2 · Confidentiality Framework

Document	Round 1 Bidders	Round 2 Finalists	Award Winner	Bidder Excluded
04_BOARD_PROPOSAL.pdf	✓	✓	✓	—
05_EXCLUSIVE_LISTING_PROPOSAL.pdf	✓ (engagement redacted)	✓ (full)	✓	—
03_BUILD_PROPOSAL.md	✗	✓	✓	—
06_REP_AGREEMENT.md	✗	✓ (review only)	✗ (not for bidder execution)	—
07_QUALIFICATION_STATEMENT.pdf	✗	✗	✗	OWNER-ONLY
08_BUYER_PROFILE.pdf	✗	✗	✗	OWNER-ONLY
09_GO_TO_MARKET_STRATEGY.pdf (this doc)	✗	✗	✗	OWNER-ONLY

NDA signed before any doc release. Mutual · 2-year term. Reserve right to walk at any round without explanation.

3 · Communication Discipline (single point of contact)

- ALL bidder communication routes through Broker (single voice · single record)
- NO direct bidder → Owner contact during silent periods (except final award call)
- All Q&A LOGGED + REDISTRIBUTED to all bidders within 24 hours (zero information asymmetry · all bidders see same questions and answers)
- Scheduled office-hours windows: **Round 1 office hours T+5 · Round 2 office hours T+15**

4 · 30-Day Process Timeline (locked · master calendar)

Day	Action	Artifact
T+0	Flight sheet sent to 3-5 firms · NDA signed	NDA executed · doc set released
T+0 to T+10	Round 1 silent period · bidders prepare	—
T+5	Office hours · logged Q&A redistributed	Q&A log v1
T+10	Round 1 bids due · all 9 items	Bid receipts
T+11 to T+13	Broker evaluation · scoring · shortlist 2	Scoring rubric · shortlist memo
T+13	Round 2 invites · extended doc set released	Round 2 invite + LOU draft
T+15	Office hours #2 · architecture clarifications	Q&A log v2
T+20	Round 2 bids due · arch + 14-day plan	Bid receipts
T+21 to T+24	Final evaluation · Owner review · award decision	Final scoring · Owner memo
T+25	Award announced · finalist notified · runner-up retained as backup	Award letter · DDEED-AWARD-*
T+25 to T+30	LOU executed · scope locked · Hedera anchor	LOU executed · DDEED-LOU-*

5 · Reserve / Walk-Away Discipline (PASS doctrine applied to bidder selection)

Automatic walk triggers (Broker exercises without Owner consultation): - No bidder meets 60% cut score → re-issue with refined bidder pool - All bidders fail Founder voice preservation (V03 validator) → walk regardless - Bidder requests Owner direct contact during silent period → bidder disqualified - Bidder shares confidential docs externally → disqualified + NDA enforcement - Best bid exceeds reserve ceiling (to be set with Owner before Round 1) → walk + re-issue

Re-issue option: if all 3 firms in first cycle are walked-from · Broker expands pool to 5-7 firms for second cycle with refined doctrine extract.

6 · Phased Award Structure (matches phased pricing)

Award binds bidder to Phase 1 fixed price ONLY. Phase 2-4 negotiated as separate scope expansions at each milestone:

- Phase 1 award + 6-month exclusive option on Phase 2-4
- Phase 2 negotiated at Phase 1 close (uses Phase 1 delivery quality as input · failed Phase 1 = walk)
- Phase 3 negotiated at Phase 2 close · same gating
- Phase 4 negotiated at Phase 3 close · same gating

Owner optionality preserved: if winning bidder underperforms on Phase 1 · Owner can revoke Phase 2-4 option and re-bid those phases · without breach.

7 · DDEED-Anchored Award Record (process integrity)

The Round 3 award decision · evaluation rubric scores · and final LOU all get hashed and anchored on Hedera HCS topic **0.0.10291838** within 24 hours of award:

- Award decision → **DDEED-AWARD-DOS-001-v1**
- Final LOU → **DDEED-LOU-DOS-001-v1**
- Evaluation rubric scores → **DDEED-RUBRIC-DOS-001-v1**

Each anchor publicly verifiable at hashscan.io. The award process itself becomes part of the books-and-records that DefendableOS will eventually sell as proof of operational discipline.

8 · Cross-Use Note · BUILDER vs BUYER selection

This same 3-round controlled call-for-offers framework applies to **both** the BUILD vendor selection (immediate · for the website/app build) and the **BUYER selection** (downstream · for the asset disposition itself):

Use Case	Pool Size	Round 1 Doc Set	Round 2 Doc Set
BUILDER selection (website/app vendor · NOW)	3-5 firms	Doctrine extract + architecture requirements	Full build doc + LOU draft
BUYER selection (asset disposition · downstream)	8-12 strategic buyers	OM + comp set + engagement terms	Full books-and-records + PSA draft

Both processes use the 8 highest-and-best qualifications (adapted per use case) · the 9 required bid items (adapted per use case) · and the DDEED-anchored award record.

THE BOARD RECOMMENDATION (locked)

“Run a controlled call-for-offers process.”

“Do not let the market price this as a website.”

“Make the market underwrite it as:

AI defense protocol + trust operating system + receipt/deed infrastructure + language-backed client app.”

“That produces the highest and best result.”

CLOSING STATEMENT

A public price tells the market what to expect. A call for offers makes the market RAISE its expectations.

For a Class A 5-cap trust-infrastructure asset · the second option is the only option that produces highest-and-best. Public pricing would lock the disposition at a website-build valuation. The call-for-offers process unlocks the asset's category-definition value.

Broker recommends: 1. **Approve the call-for-offers process** (this document) 2. **Set the reserve ceiling** in private session with Broker (not disclosed to bidders) 3. **Approve the 3-5 firm Round 1 shortlist** (Broker submits list within 7 days of approval) 4. **Confirm the 30-day timeline** (T+0 = Round 1 release · T+30 = LOU executed) 5. **DDEED-anchor this strategy document** before Round 1 release (institutional confidence · process integrity)

To the shed.

 *No public price. Controlled bidder process. Highest and best · NOT lowest bid. Make the market underwrite trust infrastructure · not website builds. To the shed.*
